

MobiVisor SecureExchange

MobiVisor SecureExchange is an application from MobiVisor to secure your company's internal email traffic.

Features

- SecureExchange is not a separate e-mail service, but comprehensively secures your existing e-mail structure
- All standard e-mail functions are included, such as changing font size, font type and color, linking calendars, adding attachments, etc.
- Can be used together with all business mail applications (e.g. Outlook)
- Adoption of internal security guidelines
- Conversion of files to PDF when sending via SecureExchange to prevent access to third parties
- Prevention of screenshots of attachments
- Attachments are only opened in the e-mail application

Roll-out

- Configuration via personal MDM domain
- Select the mail types: IMAP/SMTP or ActiveSync
- Save the configuration
- Push the SecureExchange app to the users' devices
- Login via MobiVisor account, QR code or user name/password
- The mail settings are adopted by the server
- Missing information can be changed manually by the user

Hosting

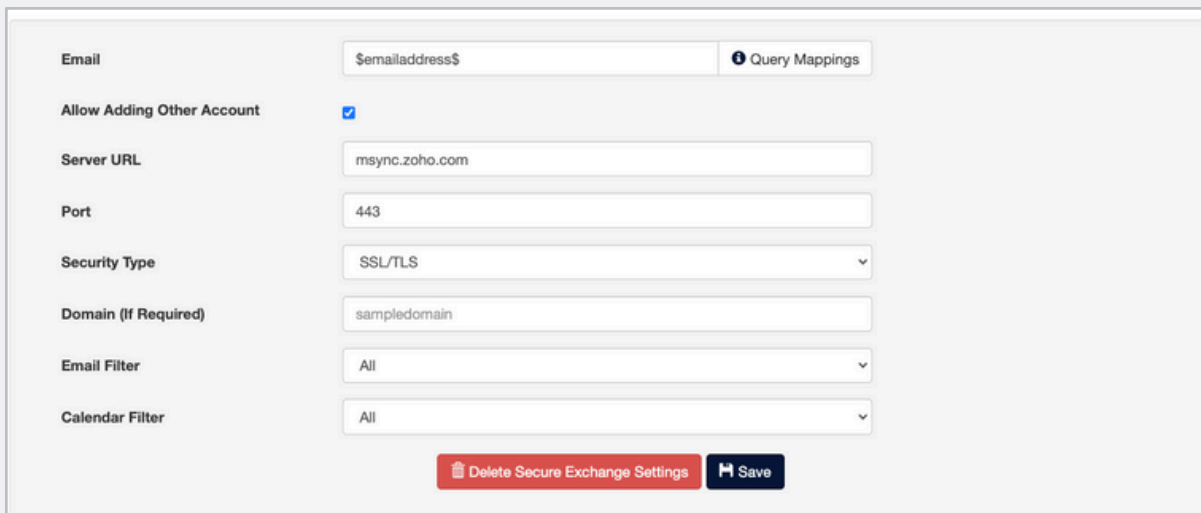

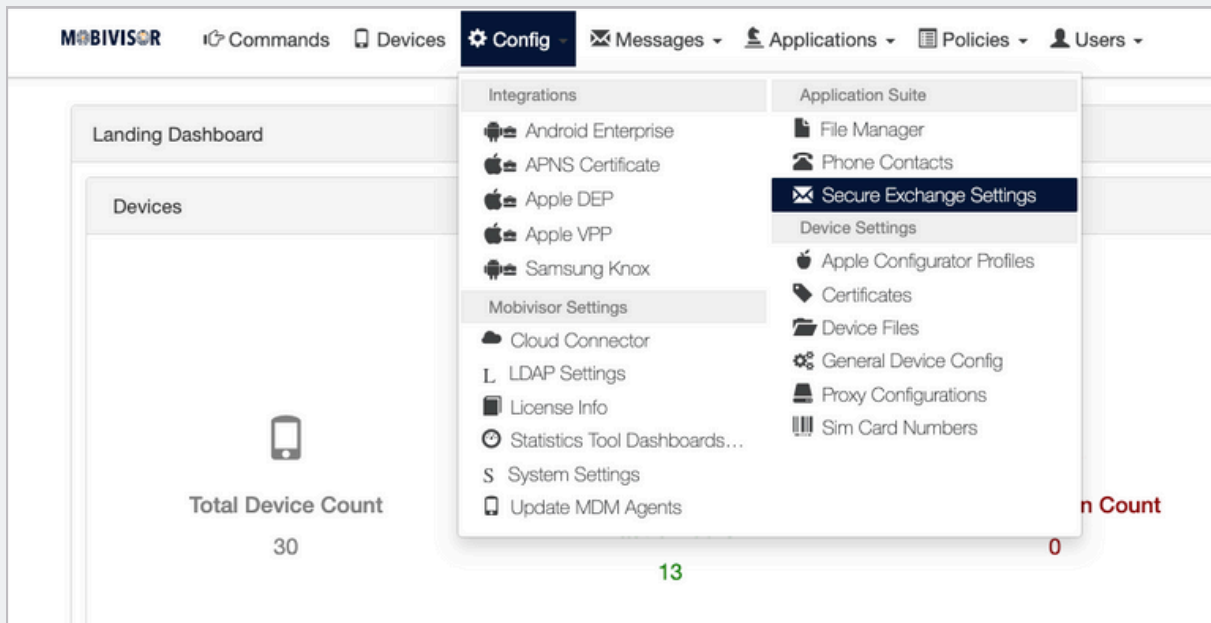

- On your company server (on-premise), in our German cloud or a private cloud
- MobiVisor and all extensions are hosted exclusively in Germany and are therefore GDPR-compliant

Security

- Uses Pop3 or IMAP standards
- Data transfer performed securely with TLS/SSL and cannot be seen or changed during transmission
- Interfaces/ APIs developed within MobiVisor: Data flow to third parties is prevented
- MobiVisor SecureExchange receives the highest rating of A+ in the Qualys SSL Labs Test (SSL Server Test).

Integration SecureExchange

- The customer must have an Exchange ActiveSync account
- In order for the company-owned Exchange account to be used via Mobivisor, the relevant settings should be defined from: **Mobivisor → Config → Secure Exchange Settings**
- Server URL information can be obtained from the company's IT department)

A screenshot of the 'Secure Exchange Settings' configuration form. The form includes the following fields and options:

- Email:** A text input field containing '\$emailaddress\$' and a 'Query Mappings' button.
- Allow Adding Other Account:** A checked checkbox.
- Server URL:** A text input field containing 'msync.zoho.com'.
- Port:** A text input field containing '443'.
- Security Type:** A dropdown menu set to 'SSL/TLS'.
- Domain (If Required):** A text input field containing 'sampledomain'.
- Email Filter:** A dropdown menu set to 'All'.
- Calendar Filter:** A dropdown menu set to 'All'.

At the bottom, there are two buttons: 'Delete Secure Exchange Settings' (red) and 'Save' (dark blue).

Got questions?

- On the customer's user information in Mobivisor domain, the relevant Exchange account should be set in the 'Email' field seen at **Mobivisor → Users**
- **If the customer uses Active Directory, user information can be synced directly**

Edit User

Email

Username

Display Name

- The SecureExchange App can either be installed via MDM to the users devices, or downloaded from the playstore

The following information should be used when logging into 'SecureExchange' application:

- Username (*'Username' in the relevant Mobivisor domain*)
- URL of the relevant Mobivisor domain
- User's password (*If the password of the Exchange account and the user password in the relevant Mobivisor domain are not the same; the application will ask for the password a second time, enter the password of the Exchange account in the second time*)
