Why use MobiVisor MDM?

What distinguishes MobiVisor MDM from other MDMs such as JAMF, Miradore or Intune?

Are commands applied in real time?

Complex MDMs such as Intune often send commands with a delay. MobiVisor MDM, however, is optimized for speed. Commands reach the devices in real time. This is particularly important for security-relevant features such as Lost Mode.

Can I use all features?

Simply unlock everything? Not with Miradore and JAMF, as you can expect additional costs if you want to use all MDM features. MobiVisor MDM provides the full range of features right from the start and without additional fees.

Are commands trackable?

As an IT admin, MobiVisor MDM allows you to see the exact status of your MDM commands via a command list. If necessary, you can even cancel open commands. Other MDMs hide this in the interface.

Can I access remote support?

Remote control via the MDM? This feature is always included with MobiVisor MDM! Other MDMs often charge extra for this important feature or do not technically support it, such as JAMF or SimpleMDM.

Is the MDM GDPR-compliant?

MobiVisor MDM is hosted in Germany and complies with the GDPR guidelines which international MDMs with a foreign cloud, such as Hexnode UEM & Miradore, do not. You should be cautious of American MDM providers with servers in Europe, as there is a risk of data being transferred to the US despite the EU location.

Can I host the MDM on-premise?

Would you like your data to be stored on your own server? MobiVisor MDM also offers on-premise installation as an alternative to cloud hosting. This is not possible with providers such as Sophos.

Can I schedule updates?

MobiVisor MDM takes MDM one step further: System updates can be conveniently scheduled via MDM so that users do not have to take care of them themselves. Providers such as JAMF do not offer this feature.
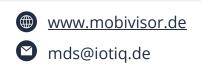

Can I create reports & analyses?

With MobiVisor MDM, you can configure which reports & data analytics you want to see displayed. All data reports can be downloaded as excel sheets as well. MDMs such as JAMF and Hexnode UEM do not offer this function.

Can I manage Configurations?

JAMF and Hexnode UEM do not offer configuration management at all.
In other MDMs such as Intune, configurations are listed very confusingly.
With MobiVisor MDM, the focus is on user-friendliness. With us, you can edit configurations for iOS and Android separately and clearly.

Discover real improvements with MDM!

MobiVisor MDM does not only offer technical benefits, such as the simplification of device management. What do our customers appreciate about MobiVisor MDM?

Save time and keep track of all devices

With MobiVisor MDM, you can manage tvOS, MacOS, iOS and Android devices via a single platform. This makes your entire mobile IT manageable at once. Setting devices up for work is much faster and less stressful with MobiVisor MDM.

Comply with GDPR, without added effort

With an MDM, you can implement more comprehensive security guidelines that significantly enhance the devices' built-in security settings. For example, you can define password policies or block specific apps and features.

Guaranteed security

Increased security settings prevent misuse of the devices. The security-relevant features of MobiVisor MDM, such as lost mode, remote lock, remote wipe and much more, can prevent data loss even if the device is lost or stolen.

Customized solutions

Divide users into different groups, equip them with different policies and apps and thus meet all needs.
